TITLE : COMPOSITION FOR PHARYNGOPATHY

ABSTRACT : PROBLEM TO BE SOLVED: To obtain a composition for pharyngopathy capable of retaining stability of povidone-iodine and useful as a gargle, or the like, by including povidone- iodine, potassium iodide and a local anesthetic, or the like, and keeping pH in a specific range.

SOLUTION: This composition for pharyngopathy comprises (A) povidone- iodine, (B) potassium iodide and (C) at least one kind of (i) a local anesthetic, preferably e.g. lidocaine and (ii) an antitussive and expectorant medicine, preferably e.g. dihydrocodeine, and pH of the composition is controlled to 1.5-3.5, preferably 1.5-3.0 by using a pH regulator such as hydrochloric acid. As preferable formulating amount of each component, when effective iodine amount of the component A is defined as 1, an amount of the component B is 2 to 10 times and an amount of the component (i) is 1-10 times and an amount of the component (ii) is 0.2-10 times.
